Effective 5/13/02: Desktop Upgrade
HR Desktop Change Summary

1. The 'BACKUP WITHHOLDING RATE' field on the Systems Control Option (SOPT) window was not in compliance with Federal Regulations (fractional percentages could not be entered). The size of the field has been expanded to accept fractional percentages.

2. The Find Code action was not always working when the cursor was placed in a field and the Find Code button from the toolbar was clicked. The Find Code button was not always active in this case. The Find Code action was working properly from the Help menu. Once the Find Code action was used through the Help menu, the Find Code button on the toolbar became active. Processing has been corrected so that the Find Code button is active appropriately and works properly.

3. The dialog bar within the ADVANTAGE Desktop Worklist was not displaying the correct number of Work Units in the Worklist if that number was greater than twenty. Processing has been enhanced so that the dialog bar in the Worklist will now display a message similar to 20 of 60 work unit(s) in "Documents"'.

4. When a user used the 'Route Work Unit' feature to route the same work unit more than once, only the first message entered in the Route Work Unit 'New Route' window was picked up from the Custom Message (WCMS) table and sent. Additionally, in the Route Work Unit 'New Route' window, the tab key tabbed within the Message textbox, rather than directly to the 'Send' button. Processing has been corrected so that each message entered is picked up from WCMS and sent, and so that the tab key tabs to the 'Send' button.

5. In ADVANTAGE Desktop 2.1, it was unknown whether a document had comments associated with it unless the user actually selects 'view comments'. Processing has been altered so that: (1) if a document has only comments then the title bar shows <See Comments>; (2) if a document has comments and a note then the title bar shows <See Comments & note>; (3) if a document has comments and attachments then the title bar shows <See Comments> <2 attachments>; (4) if a document has comments, note, and attachments, then the title bar shows <See Comments & Note> <2 attachments>. Note: If comments are added to a new document then, the label <See Comments> becomes visible only after the document has been saved and closed.

6. When a user is entering a multi-line multiple-tab document, the 'selected line' was not changing as the cursor changed lines. This caused confusion when a user switched tabs. Processing has been corrected so that: (1) Tabbing into the next line highlights the chosen line; (2) Entering data into a new line shifts the highlight to the new line; (3) Any time the header gets the focus, the line number is reset to the first line; and (4) When a user uses SHIFT+TAB to enter into the previous line, the previous line is highlighted.

7. The 'Paste Special' function was not working when a user tried to copy detail lines in within documents. Processing has been corrected so that 'Paste Special' works correctly. Note: The cursor must be within the document line where the data is to be pasted.
